Aligned AG
Herr Karl John Larsson
Pflugstr. 1
8006 Zürich

Mr Larsson,

I just wanted to let you know that we are well on our way to complete the transfer of our CentriMag® Pump DHF from our old system to Aligned Elements.

Just as we assumed, Aligned Elements has brought us some important benefits vis-à-vis the system we used to work with. The short set-up time, the targeted functionality for Design History File handling such as the integrated risk analysis, the limited need for configuring makes the system much faster to get up and running in production mode.

Our product requirements, specifications, risks, FMEAs and mitigations are now all captured and traced in Aligned Elements. Moreover, the round-trip Word Integration, allows us to get all these objects (including trace tables) into word documents, using our own document templates, getting the information displayed exactly as we want it, virtually without any manual steps.

I can sincerely recommend Aligned Elements to any Medical Device company looking for a single tool to manage requirements, specifications, risks and design reviews.

We feel very reassured by the responsiveness and ability of your team. Keep up the good work.

A handwritten signature in black ink, appearing to read "V. Steinacher", written over a light blue horizontal line.
